Cable AML: Television Del Pacifico Installs Mobile STL

About Cable AML

Cable AML is a world leader in Broadband Microwave Links, Wireless Internet Systems, Wireless Triple Play, and "Wireless Cable" or MMDS Systems operating in the licensed frequency bands from 1.5 GHz to 42 GHz.

Cable AML's customers include the largest Cable TV companies in the US and Canada, virtually every major MMDS operator in the world, and a rapidly growing number of high-speed data operators from all over the globe.

Television del Pacifico (TVP), a leading regional broadcaster in Sinaloa and Sonora States in Mexico, has installed and is operating a mobile studio to transmitter link (STL) to provide coverage of local events within an area of 50 Km radius.

TVP installed a Cable AML microwave link (Salinas model) operating in the 13 GHz frequency band to provide point to point connectivity from a mobile van to a fixed tower site. The link was implemented with a 1.2 meter diameter tower-mounted antenna on the receive and a 90 cm diameter antenna mounted on the mast of the mobile unit.

The link enables simultaneous transport of DVB-ASI streams along with IP/Ethernet and data services. Uri Rubio, Television del Pacifico Technical Manager, supervised the installation of the link and commented that "the microwave link has been a complete success. It has been
