CINET ACQUIRES MICROWAVE LINK FROM CABLE AML

ABOUT CABLE AML

Cable AML is a world leader in Broadband Microwave Links, Wireless Internet Systems, Wireless Triple Play, and “Wireless Cable” or MMDS Systems operating in the licensed frequency bands from 1.5 GHz to 42 GHz.

Cable AML's customers include the largest Cable TV companies in the US and Canada, virtually every major MMDS operator in the world, and a rapidly growing number of high-speed data operators from all over the globe.

CINET, a systems integration company based in Taiwan, has recently finished training at Cable AML's facilities in California for their new broadband Microwave Link – designed to transport up to 75 digital DOCSIS and Video QAM's.

The system consists of a Broadband Outdoor Transmitter operating in the 13 GHz band, feeding one pathover the ocean to reach an island, where a receiver feeds the local cable network directly. The microwave link will make it possible to provide cable TV service to the island without the need to install a new Headend.

According to Miranda Chen, Vice President of CINET, “I am very pleased with the quality of the signal and the level of support Cable AML provided for my team during our visit. We look forward to provide our customers with this exciting technology for expansion of their

Outdoor Transmitter

networks to previously unreachable places”.
