

## Private LTE System for Broadcaster

During the 2023 TCS **New York City Marathon** held on Sunday, November 5, 2023, at 8 AM, **Cable AML** supplied a broadcaster with a **private LTE system**. The marathon, boasting 51,402 finishers, marked the world's largest in 2023 and served as the final event in the six World Marathon Majors. Cable AML strategically positioned three base stations for seamless communication.

The first base station was strategically placed near the starting line, close to the Staten Island Bridge. The second base station, featuring two sector antennas, was swiftly set up on the Queensboro Bridge during a brief closure. The last location was situated in Central Park, near the finish line. **Cable AML** provided 120 SIM and eSIM cards for various devices, facilitating a network that enabled communication among personnel within the private network. This network also supported **mobile broadcast cameras** transmitting footage to the Communications Center throughout the event.

The broadcaster utilized over 20 cameras, including aerial views, capturing the marathon's highlights. The equipment used for this extensive setup was sourced from **CP Communications**.
